

What is differentiation?

Differentiation is instruction that is tailored to the specific needs (readiness, interests and learning level) of each student. The teacher varies the content, process and environment to help ensure that students with different needs and abilities are each being challenged and individually supported.

To meet the learning needs of each student, teachers can vary the activity types and teaching strategies that each student receives, as well as increase or decrease the level of challenge.

Six strategies to use in a differentiated classroom

How LP does it

LiteracyPlanet enables teachers to target the literacy needs of every student in their classroom. With the Teacher Assignment Tool, the teacher can deliver lessons at varying levels of difficulty to meet the specific needs of each student.

With the Teacher Assignment Tool, the teacher can choose topics that cater to student needs and interests. The teacher can also monitor student progress to adapt what the student needs to learn in order to progress.

The screenshot shows a lesson titled "Nim's Island" with an "Exit" button. On the left is an illustration of a seal and a girl on a beach. On the right is a cloze exercise interface with a progress bar (1 of 12), a score (0 correct, 0 incorrect), and a list of words to choose from: introduce, deserted, destination, unique, home.

Complete this cloze exercise to reveal the main idea.

The main idea of this extract is to _____ Nim, her _____ pets and the _____ island _____ that she calls _____.

introduce deserted destination
unique home
