

# Learn and Practice

## What is Learn and Practice?

Learning that is most effective includes carefully sequenced steps that provide students with opportunities to practice along the way. Well-designed lessons that scaffold understanding are followed by intervals that enable the student to put in place what they have learned.

### Programs that get students the best results include:

#### Explicit Instruction

- clear and detailed instructions that are carefully planned and sequenced.

#### Real-World Examples

- examples that help illustrate the information in the instruction.

#### Plenty of Practice

- opportunities to put in place what has been modelled or demonstrated.

#### Timely Assessment

- a tool to measure student knowledge and understanding.

## How LP does it

LiteracyPlanet provides lessons that help students learn and practice. The lessons are carefully sequenced to build student knowledge and understanding and these are followed by assessments that enable students to demonstrate what they have learned.

Each mission in LiteracyPlanet includes a learn and/or practice component. Teachers can use the learn component of a lesson to teach the concept to the whole class. They can also assign the concept to students to practice and demonstrate their understanding of the concept.
